MODEL NUMBER: AD104-FFM

Product Type: Gross weigh bagging scale designed to connect directly to a molasses blender.

Features:

- Catch chamber between the molasses blender.
- Pneumatic cut off gate above the bag spout.
- Air operated bag clamps.

Capacity:

- Up to 6 Bags per minute

Description:

- Designed to connect directly to a molasses blender. When the first bag is placed onto the bag spout the blender will then begin blending and discharging product. In between bags a cut off gate closes and product will accumulate in a catch chamber until the next bag is in place. This allows the blender to continue running and never stops. It also eliminates the need for a supply bin in which to store the product. Production rates are slower than our other models, but the machine makes very little contact with the product and is installed very easily.

Controls:

- See the "Controls" page on our website to learn how our machines run and weigh product and the features which make our controls unique and our machines second to none in the industry.

The Johnson & Sons advantage:

- Every piece of Johnson equipment is built to your design needs
- The most accurate bagging scales on the market
- The industry standard in customer service
- Quick and easy maintenance and repair
